

New species and combinations in the pale-spored Agaricales

HARRI HARMAJA

HARMAJA, H. 1978: New species and combinations in the pale-spored Agaricales. — Karstenia 18: 29—30.

The following new species are described (all the types are from Finland): *Clitocybe gigas* Harmaja, *Clitocybe subsinopica* Harmaja, *Cystoderma lilacipes* Harmaja, *Melanoleuca brevispora* Harmaja, and *Pleurotus viscidus* Harmaja. *Clitocybe subdryadicola* Harmaja (nomen novum) must replace *C. serotina* Lamoure (non Vel.). The following new combinations are made: *Cystoderma jasonis* (Cooke & Massee) Harmaja, *Cystoderma terreii* (Berk. & Broome) Harmaja, and *Rhodocybe harperi* (Murr.) Harmaja.

Harri Harmaja, Botanical Museum, University of Helsinki, Unioninkatu 44, SF-00170 Helsinki 17, Finland

Clitocybe gigas Harmaja, n. sp. — *A Clitocybe geotropa, quae sat similis est, differt basidiocarpis maioribus (diametro 9—28 cm) et infundibuliformibus, stipite breviore (4—11 × 1.2—3.8 cm), lamellis densioribus et angustioribus, hyphis oleiferis lamellarum paucis et sporis sat dissimilibus: 6.5—8.5(—11.0) × 4.5—6.0(—7.0) µm, magnitudine variabilibus in eadem lamella, praecipue ± lacrymoideis sed partim ± late ellipsoideis.* — *Typus:* Finland, prov. Kuusamo, par. Kuusamo, Liikasenvaara, Korvasvaara, alt. 280 m, dolomite area, in litter in luxuriant mixed grass-herb forest and in somewhat drier forest, accompanied by *Calypso bulbosa*, *Carex capillaris*, *C. digitata*, *Cypripedium calceolus*, *Equisetum scirpoides*, *Fragaria vesca*, *Poa alpina*, *Saussurea alpina*, *Selaginella selaginoides*, *Rhytidiodelphus triquetrus*, *Clitocybe lohjaensis*, *C. strigosa*, *Gerronema albidum*, *Tricholoma bufonium*, *Helvella hyperborea* (on 10.IX.), *H. palustris*, *Lactarius scrobiculatus*, *Otidea propinquata*, 26.VIII.1970 H. Harmaja (H). Other specimens from Kuusamo also seen.

Clitocybe subdryadicola Harmaja, nom. nov. — *Clitocybe serotina* Lamoure, Trav. Sci. Parc Nat. Vanoise 2: 141. 1972; non *Clitocybe serotina* Vel., Nov. mycol.: 72. 1939.

Clitocybe subsinopica Harmaja, n. sp. — *Clitocybis sinopicae valde similis, ab ea praecipue differt basidiocarpo typice tenuiore, sporis minoribus (6.0—8.5 × 4.0—5.0 µm) et verisimiliter massa sporarum pallide flava. Est C. sinopica sensu Bigelowii.* — *Typus:* Finland, prov. Kuusamo, par. Kuusamo, church village, ca. 5 km north of church, ca. 500 m SE of western end of the small lake Petäjälampi, frequent in site used for German encampment in World War II, in dry heath forest with *Pinus sylvestris*, 8.VIII.1966 T. Ahti 22794 (H). Specimens also seen from Sweden and the U.S.A.

Cystoderma jasonis (Cooke & Massee) Harmaja, n. comb. (*Agaricus Jasonis* Cooke & Massee in Cooke, Grevillea 16: 77. 1888. Holotype in K examined. — *Cystoderma amianthinum* var. *longisporum* Kühn. ex Kühn., Bull. Soc. Linn. Lyon 38: 185. 1969.)

Cystoderma lilacipes Harmaja, n. sp. [*Cystoderma longisporum* var. *purpurascens* Heinem. & Thoen, Bull. Soc. Mycol. France 89: 18. 1973. — Not validly published according to 'Code', Art. 43.] — *A Cystodermate jasonis differt basidiocarpo tenuiore, pileo brunneo minutissime granuloso, apice stipitis supra zonam annularem violaceo, carne pallida sed non flava, sporis ca. 6.0—7.5 ×*

3.3—4.8 μm (*leniter crassioribus*). — *Typus*: Finland, prov. Etelä-Karjala, par. Vehkalahti, NW part of Turkia village, acid rocky outcrops in *Larix* plantation, on/among *Polytrichum juniperinum*, 1.X.1977 L. Fagerström (H). Additional specimens from southern Finland also seen.

Cystoderma terreii (Berk. & Broome) Harmaja, n. comb. (*Agaricus Terreii* Berk. & Broome, Ann. Mag. Nat. Hist. 4(6): 462. 1870. Holotype in K examined. — *Agaricus granulosus cinnabarinus* Secr., Mycogr. suisse 1: 60. 1833. — *Cystoderma cinnabarinum* (Secr.) Fayod ex Konr. & Maubl., Icon. Sel. Fung. 3(3): pl. 238. 1927.)

Melanoleuca brevispora Harmaja, n. sp. — *Pileus* 3—7 cm *latus*, obscure brunneus. *Stipes* 6—12 \times 0.4—1.2 cm, mediocriter brunneus, glaber. *Lamellae* albidae. *Odor* et *sapor* nullus. *Hyphae* defibulatae. *Sine cystidiis* et *pileocystidiis*. *Sporae* 5.0—7.5 \times 4.0—5.2 μm , late ellipsoideae vel subglobosae, tunica verrucosa amyloidea. — *Typus*: Finland, prov. Varsinais-Suomi, Karkkila (Pyhäjärvi), Haavisto, in deep moss in luxuriant rich fen 500 m E of the small lake Iitalampi, with *Carex*

acutiformis, *C. appropinquata*, *C. flava*, *C. heleonastes*, *Epipactis palustris*, *Luzula sudetica*, *Paludella squarrosa*, *Scorpidium trifarium*, *Sphagnum warnstorffii*, *Tomentypnum nitens*, *Bovista paludosa*, 25.IX.1969 H. Harmaja (H).

Pleurotus viscidus Harmaja, n. sp. — *Basidio-*
carpus satis tenuis. *Pileus* 2—5 cm *latus*, *leniter* et
irregulariter hygrophanus, pallide lilacinus dein cum
maculis ferrugineis, *viscidus*. *Stipes* distinctus, 1—2
 \times 0.3—0.8 cm, *lateralis* vel *sublateralis*, albus, cum
zona annulari. *Lamellae* albae dein cum *maculis*
ferrugineis, *elasticae*. *Odor* et *sapor* nullus. *Hyphae*
tramatis *pilei* et *lamellarum* intricatae, monomitiae,
crassitunicatae (usque ad 2.5 μm), *fibulatae*.
Cystidia desunt. *Sporae* 7.5—10.0 \times 2.5—3.5 μm ,
inamyloideae, *cylindricae*, *rectae* vel *parce curvatae*,
in massa albae. — *Typus*: Finland, prov. Kainuu, Kajaani rural commune, Jormua, moist grass-herb forest on brookside, in somewhat decayed log of *Salix caprea*, 25.VIII.1976 H. Harmaja (H).

Rhodocybe harperi (Murr.) Harmaja, n. comb.
(*Clitocybe Harperi* Murrill, Mycologia 5: 209. 1913.
Holotype in NY examined.)
